

# Parking Lot System

Emmanuel Mendoza

# What is the product?

- The idea is to create an easy to use parking lot system that is mainly user centered.
- It allows a seamless transaction between the customer and getting a ticket to park

# Who is it used for?

- Used predominantly for customers
  - However, parking lot security and employees have a role as well
- Allows a customer to pay for a ticket in multiple ways
- Allows security/employees to validate tickets if needed

# Roadmap

01

**Implement Employee Dashboard to monitor lot**

02

**Implement automatic mode on ticketing machine for 0 parking spots left**

03

**Implement Security Dashboard to check for compliance in tickets**

# **NOW ONTO THE DEMONSTRATION**

# Brief Plan for the Future

01

## Implement Security/Employee User

Allow the security/employee to validate a ticket is correct to ensure customers aren't reusing tickets and reset the cars in the database for the next day

02

## No parking available format

Shows customers and employees when there is no parking available and how long customers would need to wait
